Mr. William K. Reilly, EPA Administrator,
Environmental Protection Agency,
401 M Street S.W.
Washington D.C. 20460

SEP 6

Dear Mr. Reilly:

As an 81 year old individual, I am very supportive of a clean environment. It is of interest to me to study products that will help to reduce dangerous emissions.

After studying the favorable results of ETHYL CORP. product, HITEC 3000 as an additive to gasoline and its wide use in Canada for over 10 years, I see no reason why any footdragging should be used to allow its use here in the States.

I note that since 1978 the Canadians have driven more than 400 billion miles on gasoline containing the HITEC 3000 additive with no harmful effects to the environment.

In my lifetime, I found the only way to get anything done is to do it and certainly if your committee who has to act on the approval of this product, there are certainly many major cities in this Country that are plagued with smog and since the product is not going to be adverse to the atmosphere, it would be a most favorable time to try it now in those areas.

Use of the additive will save the importing of about 30 million barrels of crude oil a year. I am sure that the people of this Country do not need anymore red tape to solve a problem when something is available and accepted in Canada.

I trust that your foresight is constructive. I am

Sincerely yours,

William S. Adelman
